SHASHIDHARA S

Angular Frontend Developer | TypeScript & RxJS | Enterprise UI | Node.js & REST API Exposure
sshashidhar709@gmail.com | 9741885325 | Bangalore, India | linkedin.com/in/shashidhara709

PROFESSIONAL SUMMARY

Angular Frontend Developer with full-stack exposure and 3+ years of experience building scalable, responsive enterprise banking and approval-workflow applications. Strong expertise in Angular 21 (Signals), TypeScript, JavaScript (ES6+), RxJS, HTML5 and CSS3, with reusable, component-based UI on enterprise frameworks such as Angular Material, AG-Grid and Tailwind CSS. Hands-on with REST/SOAP API integration (20+ endpoints) and Node.js/NestJS backend collaboration, applying JWT/OAuth and RBAC for secure UI. Focused on performance optimization, debugging and code quality, working with backend engineers, QA and architects in Agile/Scrum teams. Recognized 3 times in 6 months, including Employee of the Month.

TECHNICAL SKILLS

- **Frontend Technologies:** Angular 21 (Angular 2+ framework), Signals, RxJS, Standalone Components, Angular Routing, Reactive & Template-Driven Forms, HTML5, CSS3, SCSS, Responsive Web Design, Cross-Browser Compatibility, OnPush / Zoneless Change Detection, Component-Driven Architecture, Reusable UI Components
- **UI Frameworks and Libraries:** Angular Material, AG-Grid, Formly, Tailwind CSS, Bootstrap, Highcharts, OpenText AppWorks (enterprise platform UI integration)
- **Programming Languages:** TypeScript, JavaScript (ES6+), SQL
- **Backend Technologies:** Node.js, NestJS, Prisma ORM, TypeORM, Controller–Service–Data-access architecture, Dependency Injection
- **API Integration:** RESTful API Design & Consumption, JSON, SOAP/XML Integration, Angular HttpClient, HTTP Interceptors, Error Handling & Retry Logic, Centralized API Layer, Swagger / OpenAPI, Postman
- **Database Technologies:** PostgreSQL, MS SQL Server, SQL (queries, ORM-based data access)
- **Authentication and Security:** JWT, OAuth 2.0, RBAC, Secure Code Review
- **Development Tools and CI/CD:** Git/GitHub, Git CI Pipelines & Branching Workflows, Pull Request Reviews, VS Code, Claude AI and GitHub Copilot (development, refactoring, PR review)
- **Testing and Methodologies:** Unit & Integration Testing, UAT Support, Agile/Scrum, Code Reviews, Performance Optimization, Debugging & Troubleshooting, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Consultant – Angular & Full-Stack Development | Muraai Information Technology Pvt. Ltd. *May 2023 – Present*

- Architected 15+ Angular modules for a large-scale enterprise workflow application, structuring a 4-stage approval pipeline with reusable, signal-driven components and a modular routing strategy.
- Led front-end architecture across 4 enterprise client rollouts, integrating 20+ ERP REST/SOAP endpoints into a unified Angular front end for automated multi-level approval workflows.
- Designed a centralized REST/SOAP API integration layer using Angular HttpClient and interceptors, standardizing authentication, error handling, and retry logic across 20+ backend and ERP endpoints.
- Implemented Angular Signals for reactive state management, simplifying component state handling and reducing boilerplate across multi-step forms, while leveraging RxJS for asynchronous data streams and API interactions.
- Implemented role-based access control (RBAC) across multiple user personas, driving dynamic UI rendering based on REST API-supplied permission data.
- Built config-driven, real-time analytics dashboards with Highcharts, consuming REST API data feeds with dynamic filtering for stakeholder decision-making.
- Refactored AG-Grid and Tailwind CSS components to eliminate UI bottlenecks, improving page-load performance and cross-browser consistency across all products.
- Own features end-to-end on two concurrent projects — DCR and SIMS-OS — across UI, REST/SOAP API integration, and data layers, collaborating with backend engineers on API contracts, Node.js/NestJS services, and shared business logic.
- Worked within Git-based CI pipelines and PR workflows — feature-branch development, automated build/test checks, and peer-reviewed merges; used Claude AI and GitHub Copilot to accelerate refactoring and PR review while adhering to team coding standards.
- Participated in sprint planning, backlog refinement, and technical design discussions with architects, QA, DevOps, and product/program managers.
- Mentored 2 batches of new joiners on Angular architecture, component design, and REST API integration best practices; drove systematic code reviews and bug resolution, maintaining production-ready stability across 4+ go-live deployments with zero critical post-release defects.

KEY PROJECTS

SIMS-OS | Open-Source Rebuild of the SIMS (OpenText) Application | *Present*

Stack: Angular, TypeScript, Node.js, NestJS, Prisma ORM, SQL, REST APIs, Git CI/CD

- Contributing to re-engineering the SIMS application, originally built on the OpenText platform, into an open-source full-stack solution using Node.js, NestJS, Prisma, and SQL.
- Developing NestJS REST API modules with a layered Controller–Service–Data-access structure and dependency injection, backed by Prisma-managed SQL schemas and queries.
- Replacing platform-specific SOAP/XML integrations with standard REST APIs consumed by the Angular front end through a centralized service layer.
- Collaborating across front-end, back-end, and QA on API contracts and data models, working in the same Git CI pipeline and PR-review workflow.

Enterprise Credit Workflow Application | Domestic Credit Requests (DCR) Platform (Banking) | *Jan 2026 – Present*

Stack: Angular 21, TypeScript, Signals, RxJS, Angular Material, Formly, Tailwind CSS, AG-Grid, REST/SOAP API Integration, Git CI/CD

- Engineered a full-scale, multi-module Angular application for banking credit workflows, supporting a 4-stage approval pipeline — Initiation, Review, Decision, and Implementation — across web and mobile.
- Built 15+ Angular modules covering profile management, entity details, analytics, and multi-tab document/approval tracking.
- Applied Angular Signals for reactive state management across multi-step forms, using RxJS for asynchronous data streams and API calls.
- Integrated REST/SOAP APIs to automate workflow-stage transitions, approval routing, process history, and audit-trail management across all modules.
- Engineered advanced form-state management (Clone, Save-as-Version, Submit) with multi-tab navigation for Comments, Attachments, Approvals, Audits, and Discussions.
- Delivered through a Git CI pipeline and pull-request workflow, using Claude AI for development assistance and PR review.

Enterprise Approval Automation Platform | Supplier Invoice Management System (SIMS) | *Sep 2023 – Jan 2026*

Stack: Angular, TypeScript, AG-Grid, Tailwind CSS, Highcharts, REST/SOAP API Integration

- Spearheaded UI engineering across 4 client rollouts and 20+ REST/SOAP-integrated ERP entities, standardizing digital approval workflows for enterprise clients.
- Designed master-data screens with full CRUD via REST APIs, enabling business teams to self-serve configuration changes without backend dependency.
- Configured end-to-end multi-level approval workflows, automating sign-off chains and eliminating manual intervention through API-driven state transitions.
- Delivered real-time analytics dashboards using Highcharts with dynamic filtering, powered by live REST API data feeds.
- Key contributor to a major client go-live integrated with an external ERP system — awarded Outstanding Contribution Award for delivery excellence.

AWARDS & RECOGNITION

- **Employee of the Month**, Muraai Information Technology — Oct 2025: Recognized for exceptional dedication, flawless deliveries, and innovation across multiple concurrent client developments.
- **Outstanding Contribution Award**, Muraai Information Technology — Aug 2025: Recognized for excellence in Angular development during a major enterprise client go-live with external ERP integration.
- **Peer-to-Peer Recognition (Innovative Category)**, Muraai Information Technology — May 2025: Awarded for creativity and innovation in Angular front-end development and delivering impactful solutions.

EDUCATION

- **Bachelor of Engineering (B.E.):** CMR Institute of Technology, Bangalore — Aug 2018 – Aug 2022

CERTIFICATIONS

- **Java Full Stack Development:** JSpiders, Bengaluru
